## 1.7 COMPARABILITY

In principle, a comparison or assessment of the environmental impacts of different products is only possible if they have been prepared in accordance with EN 15804+A2. For the evaluation of the comparability, the following aspects have to be considered in particular: PCR used, functional or declared unit, geographical reference, the definition of the system boundary, declared modules, data selection (primary or secondary data, background database, data quality), scenarios used for use and disposal phases, and the life cycle inventory (data collection, calculation methods, allocations, validity period). PCRs and general program instructions of different EPD program operators may differ. Comparability needs to be evaluated. For further guidance, see EN 15804+A2 (5.3 Comparability of EPD for construction products) and ISO 14025 (6.7.2 Requirements for comparability).

## 2 Product

### 2.1 PRODUCT DESCRIPTION

Concrete is a mixture of cement, sand, gravel and water, with or without additives and chemical admixtures.

On the construction site fresh concrete will be filled in formwork, compacted and hardens in the desired shape. The hardening process happens throughout hydration of the cement, which turns the mixture into a solid artificial rock.

The declared product is an unreinforced concrete, which is classified as a ready-mixed concrete. Arriving on the construction site it is in a liquid state.

### 2.2 APPLICATION (INTENDED USE OF THE PRODUCT)

Der frische Beton wird i.d.R. innerhalb von 90 min auf die Baustelle geliefert und in die vorgeschalteten Bauteile bzw. die ausgehobenen Schlitzwandelemente gegossen und verdichtet.

### 2.3 REFERENCE SERVICE LIFE

### 2.4 TECHNICAL DATA

Bohrpfahlbeton mit einer Druckfestigkeitsklasse von C30/37

### 2.5 DESCRIPTION PRODUCTION PROCESS

Die Rohstoffe für die Betonherstellung werden angeliefert, zwischengelagert und dann nach festgelegten Rezepten mit einer vorgeschriebenen Reihenfolge in den Betonmischer dosiert. Im Betonmischer werden alle Rohstoffe gemeinsam für eine festgelegte Zeit vermischt. Das fertige Produkt wird in den untergestellten Fahrmischer verladen und zum Kunden transportiert.

### 3 Calculation rules

#### PRODUCT STAGE (A1-A3)

All input flows (e.g. raw materials, transportation, energy use, packaging, etc.) and output flows (e.g. production waste) are considered in this LCA. The total neglected input flows do therefore not exceed the limit of 5% of energy use and mass.

#### END OF LIFE STAGE (C1-C4)

All input flows (e.g. energy use for demolition or disassembly, transport to waste processing, etc.) and output flows (e.g. end-of-life waste processing of the product, etc.) are considered in this LCA. The total neglected input flows do therefore not exceed the limit of 5% of energy use and mass.

#### BENEFITS AND LOADS BEYOND THE SYSTEM BOUNDARY (D)

All benefits and loads beyond the system boundary resulting from reusable products, recyclable materials and/or useful energy carriers leaving the product system are considered in this LCA.

## 5 Results

For the impact assessment, the characterization factors of the LCIA method EN 15804 +A2 Method v1.0 are used. Long-term emissions (>100 years) are not considered in the impact assessment. The results of the impact assessment are only relative statements that do not make any statements about end-points of the impact categories, exceedance of threshold values, safety margins or risks. The following tables show the results of the indicators of the impact assessment, of the use of resources as well as of waste and other output flows.

**Disclaimer 1** – This impact category deals mainly with the eventual impact of low dose ionizing radiation on human health of the nuclear fuel cycle. It does not consider effects due to possible nuclear accidents, occupational exposure nor due to radioactive waste disposal in underground facilities. Potential ionizing radiation from the soil, from radon and from some construction materials is also not measured by this indicator.

**Disclaimer 2** – The results of this environmental impact indicator shall be used with care as the uncertainties on these results are high or as there is limited experienced with the indicator.
